TITLE : ELECTRONIC SLIP SYSTEM

ABSTRACT : PURPOSE: To attain an electronic slip system to automatize a flow of slip and a slip processing by providing a business processing flow control means based on a business processing flow.

CONSTITUTION: A terminal equipment 1 is a terminal which is connected to an electronic mail transmitting receiving mechanism 2 and can be displayed and printed only by a person having a discriminating card. The mechanism 2 transfers a slip between the terminal equipment 1 and a slip body storing file 4 and communicates the information of the storing of the slip to the file 4 to a slip control mechanism 5. The mechanism 5 has the function of the interface of the mechanism 2, checks the form and contents of the slip and distributes the control to an approving information control mechanism 6 and a business processing flow control mechanism 8. The mechanism 6 inspects the information of the slip and controls an approving route. The mechanism 8 refers to a business processing flow describing file 7 and controls the business processing flow of an electronic mail. A business processing automatizing program 10 executes the business processing mechanism under the control of a business processing automatizing program activating monitoring mechanism 9.
